**Subject:** Microsoft Settlement

This email is in reference to the remedies in the Proposed Final Judgement filed by microsoft.

For them to be able to exclude not-for-profit organizations access to Microsoft's API's, Documentation, or Communications Protocols would be in effect, continuing to keep their main competition from succeeding. Microsoft's biggest threats to dominating the Internet world are products such as Apache, Sendmail, Perl and PHP. All open source non-commercial products that are developed by not-for-profit organizations.

The DOJ needs to understand that they just can not compete on the level with Microsoft technically. They can not allow Microsoft to make their own recommendations for a "Remedy".
